

CO

The idea:

Concrete Ciré is a popular plastering technique that is well understood within the interior and home decor sector. This plastering method creates and defines beautiful, classy and even bold wall statements in many different styles and is ment for any individual, family or corporation that loves to be unique.

Our Concrete Ciré wallpapers now makes it possible to apply this same popular plastering technique as a beautiful metallic wallpaper to your wall, without the need of a single gram of plaster.

The use of our Concrete Ciré wallpaper has many advantages, one of them being the speed of application, whilst conventional plastering could take days or maybe even weeks to apply, our Concrete Ciré wallpaper is applied within a few hours. Another advantage is that our Concrete Ciré wallpaper is a much more cost effective method than conventional plasterwork.

“ This book contains five main designs with five color variations per design as shown in this book with a actual wallpaper sample. Each design is a seamless pattern, which can be repeated left, right, bottom to top without the design being enlarged or scaled. Because the wallpapers are digitally printed, complete customization is possible for every wall imaginable. ”
